Invoking: search' with 'Information about sharks'

Some sharks are filter-feeding planktivores, such as the whale shark and basking shark, which are among the largest fish that ever lived. Sharks are caught by humans for shark meat or shark fins. Many shark populations are threatened by human activities. From colorful picture books to educational reads, find ocean-themed stories for children. Find early reader and picture books about the ocean for curious young minds at Amazon. Like rays and shales, sharks fall into a subclass of fish called elasmobranchii. Species in this subclass have skeletons made from cartilage, not bone, and have five to seven gill slits on each side of their heads (most other fish have only one gill slit on each side), which they use to filter oxygen from the water. Whale sharks ... the largest fish ... See full list on nationalgeographic.com Sharks are found in deep and shallow waters throughout the world's oceans, with some migrating vast distances to breed and feed. Some species are solitary, while others hang out in groups to varying degrees. Lemon sharks, for example, have been found to congregate in groups to socialize. Scientists are still trying to figure out how long sharks live... See full list on nationalgeographic.com People aren't on a shark's menu. Even though shark attacks have increased at a steady rate since 1980—a result of better recording of attacks and a rising human population—they're still exceedingly rare. A beachgoer has only a one in 11.5 million chance of being bitten. Sharks bite people out of curiosity, to defend themselves from a perceived threat... See full list on nationalgeographic.com Sharks may be an essential threat to us, but we are to them. Humans are responsible for drastic declines in shark populations. Overfishing is the biggest threat. An estimated 100 million sharks are killed each year, mostly to supply demand for an expensive Chinese dish called shark fin soup. Some fisheries allow the catch of whole sharks, like... Invoking: 'wikipedia' with {'query': 'hammerhead shark'}

Page: Hammerhead shark
Summary: The hammerhead sharks are a group of sharks that form the family Sphyrnidae, named for the unusual and distinctive form of their heads, which are flattened and laterally extended into a cephalofoil (a T-shape or "hammer"). The shark's eyes are placed on each end of this T-shaped structure, with their small mouths directly centered and underneath. Most hammerhead species are placed in the genus Sphyrna, while the winghead shark is placed in its own genus, Eusphyrna. Many different but not necessarily mutually exclusive functions have been postulated for the cephalofoil, including sensory reception, maneuvering, and prey manipulation. The cephalofoil gives the shark superior binocular vision and depth perception, as well as increased surface area for electroreceptors. Hammerheads are found worldwide, preferring life in warmer waters along coastlines and continental shelves. Unlike most sharks, some hammerhead species will congregate and swim in large schools during the day, becoming solitary hunters at night.

Involving: 'save_text_to_file' with 'Saudi Arabia Vision 2030 is an ambitious economic and social reform plan that was announced in April 2016 by Crown Prince Mohammed bin Salman. The plan aims to reduce the country's dependence on oil, diversify its economy, and develop public service sectors, such as health, education, infrastructure, recreation, and tourism. The vision is built around three primary themes: a vibrant society, a thriving economy, and an ambitious nation. Vision 2030 also seeks to create job opportunities for Saudi citizens, foster innovation, and promote social welfare programs. The plan includes various initiatives such as the development of the entertainment industry, investments in renewable energy, and the promotion of tourism in historic and cultural sites.'
